

SIMONE RELAX

New Simone relax armchair

We also present an important innovation in the world of recliners. Just like in the Lenny model, where we managed to incorporate a reclining mechanism without hardly modifying the original design, now, after many tests and hard work, we have managed to add a relax mechanism to another one of our icons, the Simone armchair.

The size and proportions do not vary, it only has a slight difference in the seat cushion, to try to offer greater comfort when it is open.

It can only be manufactured with the option of a swivel base, although this could be locked to prevent it from turning.

If our Simone armchair already captivated us with its great comfort, it now has been improved.
