- \* Wide Arm (83 cm)
- \* Back with adjustable headrest
- \* Electric recliner
- \* Electric Power-Lift
- \* Optional Arm covers
- \* Back cushion included
- \* Optional cordless battery pack

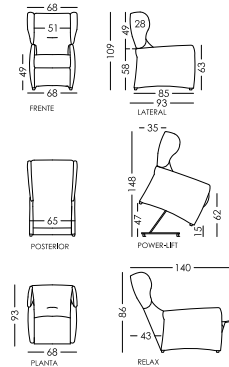

# Donatello

- \* Wide Arm (83 cm)
- \* Wing chair
- \* Electric recliner
- \* Electric Power-Lift
- \* Optional Arm covers
- \* Optional Back cover
- \* Optional cordless battery pack

# Raphael

- \* Narrow Arm (68 cm)
- \* Wing chair
- \* Electric recliner
- \* Electric Power-Lift
- \* Optional Arm covers
- \* Optional Back cover
- \* Optional cordless battery pack

## **Curved footrest to keep the feet in the centre**

The footrest has been designed with curved shape to make it more comfortable, avoiding that the legs fall to the sides.

## Shallow armchair, straighter back for upright position

The Toscana Collection armchairs are shallower than usual, and they have been designed with a **straighter back** to make them much more comfortable.

Models **Leonardo** and **Michelangelo** include a **thin back cushion** of memory foam or 36kg soft foam to make the chairs even shallower, and allow a more upright position.

## Smaller Depth, straighter back

### Upright position

Although wing chairs may be very comfortable, when the user has back or neck problems (which normally get more serious with ageing), they can favour an incorrect and uncomfortable position.

With the **adjustable headrest** we create a **straight and upright position** that provides greater welfare, and avoids the annoying back pain.

## With castors for easy movement

We have created a patented mechanism with castors to move the armchair as if it was a wheel chair.

## Narrow arm

With the option of narrow arm in models Leonardo and Raphael (68 cm the width of the armchair), we can move the chair through doorways.

## Braking system

Moreover, we have a patented braking system on the powerlift system that allows us to adjust the height and set the position without operating any pedal or having to manually lock the castors. This way the person can sit up straight for lunch for example, thus avoiding having to change to another seat.

## Footrest

### Curved footrest to keep the feet in the centre

The footrest has been designed with curved shape to make it more comfortable, avoiding that the legs fall to the sides.

## Resting heart position

### Recliner with a healthy resting heart position

The reclining mechanism favours a **good resting heart position**, since it raises our legs up to our heart level to **lower the heart rate**. Moreover, in this position we keep the **same angle** between our back and legs as just sitting, **avoiding the usual dizziness** caused when the back reclines too much.

## Seat

### Firm seat, more comfortable and with shape backwards to avoid sliding

The **seat is firm** to make it more comfortable for elder people. Also **the seat cushion has been designed slightly thicker** on the front, to avoid sliding.

## High arms

### High arms to favour a comfortable upright position.

The arms of the **armchairs** in this collection are **slightly higher** than usual; this allows us to stay in an **upright position** with our arms resting completely.

The angle between back and legs does not change.

## Maintenance

\* **Fabric with stain free and AquaClean (liquid repellent) treatments.**

\* **Optional arm covers**

## Electric Motor

\* **Optional long battery life.**

\* **Ergonomic charge connector in a high position.**

\* **Easy to operate with just one motor.**

We use fabrics with **Stain Free and Aqua Clean treatments**. Also they are treated against mites, fungi and bacteria. They have all the cleaning advantages of the imitation leather, but it is breathable and has a **much nicer touch**.

Apart from this, there are optional **arm covers**, as well as an **optional back cover** for models Donatello and Raphael. The motor to operate the reclining and the lifting actions is electric and needs to be connected to the socket. However, **we offer an optional battery pack** to avoid cables.

It is a **long life battery**; depending on the use it may have a working life from **1 week to 3 months**.

To charge it, it is not necessary to remove it from the armchair. We have incorporated a pocket to hide the cable and **battery pack at the back of the chair in a high position**. Just take the cable out and plug it in.
